

COMPILING

Follow these steps if you want to generate binaries, DSK and CDT files from sources:

1. Clone [CPCtelera](https://github.com/lronaldo/cpctelera/)

- `git clone https://github.com/lronaldo/cpctelera/`

2. Install [CPCtelera](https://github.com/lronaldo/cpctelera/)

- `cd cpctelera`
- `./setup.sh`

3. Close and reopen your terminal to force configuration reload

4. Download Retroboom project (you can do it from our github too)

- `git clone https://github.com/ABPMultimediaUA/gametro`

5. Enter retroboom folder and run `make`

- `cd retroboom`
- `make`

6. Finally, if you want to see the result with the winape emulator, you just need to type '`cpct_winape retroboom.dsk`' in the terminal and that's it !
